

## Multiplication Problems

- Solve **only** the multiplication problems. There are some problems that need a different operation. You don't need to answer these.
  1. Jack is counting how many stickers he has.  
He puts them in piles of 10.  
How many stickers does he have if he has made 9 full piles of stickers?
  2. Jess is at the shop.  
She buys a packet of crisps for 42p and an apple for 25p.  
How much does she have to pay?
  3. At the running race, each team has 5 children in it.  
There are 8 teams at the race.  
How many children are running in the race?
  4. Eleven children have taken their shoes off at the play centre.  
How many shoes is this?
  5. There are 5 bananas in each bunch. Katie adds together the number of bananas in 7 bunches.  
How many bananas is this altogether?
  6. How much money does Charlie have if he has got nine 5p coins?
  7. How much money does Holly have if she has one 20p coin, one 10p coin and a 2p coin?
  8. How many seats are there in total if there are 6 chairs in each row and there are 5 rows?
