

Translation Measure

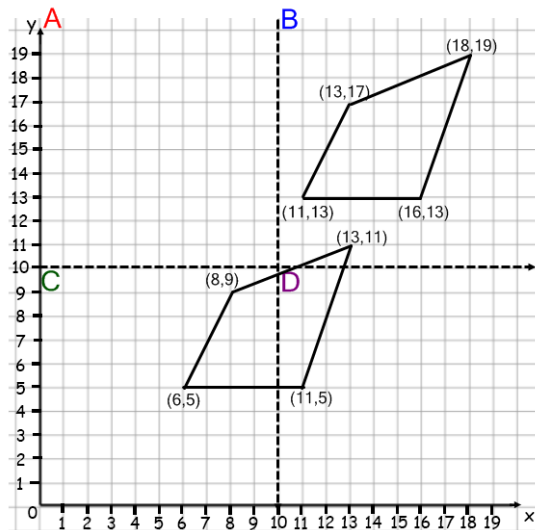

Need: Coordinates grid split into four areas (see below), pencils, rulers

- Working in pairs, a child draws a polygon in one of the four areas on the coordinates grid – A, B, C, D and writes the coordinates of the corners.

They then decide on a translation instruction, making sure that the translated polygon will fit on the coordinates grid. For example: down 8, left 5. Their partner draws the translated polygon and writes the coordinates of the corners.

- Repeat, but swapping roles.
