

At St Joseph's Primary School, we believe science should:

- *Be fun and memorable.*
- *Be active, practical, collaborative; it should take place inside and outside and should use real equipment.*
- *Children should learn through trial and error through their own investigations.*
- *Be based around science skills and use scientific language.*
- *Be recorded in a variety of ways.*
- *Enable children to learn new concepts and learn how to test their ideas*
- *Enable children to engage with experts who come into school or on visits out of school*
