Remember in Year 5, we learned: The reproduction of some plants and animals

Year 6

## **Living things** and their **habitats**

Later, in KS3, you will learn: **Differences** between species

## **Knowledge**

| By the end of this unit of study, pupils will be able to: |  |  |
|---|--|--|
| One   | Group and sort living things using different criteria and record this research in different ways including venn diagrams and classification keys |  |
| Two   | Explore the characteristics of different plant types including flowering and non-flowering plants  |  |
| Three   | Recognise and describe the five vertebrate groups  |  |
| Four  | To understand the difference between a vertebrate and invertebrate   |  |
| Five  | Research and explore animals which cannot be classified in just one vertebrate or invertebrate group   |  |
| Six   | Explore the different types of micro-organisms including viruses, fungi and bacteria   |  |

## **Key Learning**

Living things can be formally grouped according to characteristics. Plants and animals are two main groups but there are other livings things that do not fit into these groups e.g. micro-organisms such as bacteria and yeast, and toadstools and mushrooms. Plants can make their own food whereas animals cannot.

Animals can be divided into two main groups: those that have backbones (vertebrates); and those that do not (invertebrates). Vertebrates can be divided into five small groups: fish; amphibians; reptiles; birds; and mammals. Each group has common characteristics. Invertebrates can be divided into a number of groups, including insects, spiders, snails and worms.

Plants can be divided broadly into two main groups: flowering plants; and non-flowering plants

## **Key Vocabulary**

Vertebrates, fish, amphibians, reptiles, birds, mammals, warm-blooded, cold-blooded, insects, spiders, snails, worms, flowering, non-flowering, mosses, ferns, conifers
