

Investigating reflective materials

Which light source will you use? *e.g. a torch, a candle, mobile phone light etc*

Which materials will you test (pick 6-8)? *e.g. tin foil, a CD, newspaper etc.*

How will you test if they are reflective? *e.g. shine my torch on the material and look to see which reflect.*

Which materials were reflective?

Why are some materials reflective and some are not?
