

'Learning by Heart'

Developing children's knowledge of mathematical facts so that they know them 'by heart' is a valuable tool to support calculation strategies, and also helps to build confidence. Regular practice is needed to secure knowledge and help children instantly recall facts.

We encourage children to think 'Can I do this in my head?' Having a range of number facts at their fingertips really empowers the children and enables them to approach tasks with confidence.

Practical ideas to help your child

Chanting is still an effective way to learn multiplication tables. Musical times tables CDs are also quite useful – children often learn the 'rhythm and rhyme' of a song quite quickly and therefore learn to recite and recall the facts.

It is really important that children are as confident with division facts as they are with multiplication facts.

- Practice the idea of 'Family of facts' e.g. if I know that $9 \times 5 = 45$
I also know $5 \times 9 = 45$, that $45 \div 5 = 9$ and that $45 \div 9 = 5$

Spring Term 2: Know the doubles and halves of:

Numbers to 50

Multiples of 10 to 500

Multiples of 100 to 500

Doubles and corresponding halves for all whole numbers from 1 – 50 → start with even numbers as easier to halve. When halving odd numbers there will always be $\frac{1}{2}$ or 0.5 in the answer e.g., $\frac{1}{2}$ of 45 = $22\frac{1}{2}$.

Doubles and halves of all multiples of 10 to 500 → remind children about identifying multiples of 10: all multiples of 10 end in a 0 e.g., 60, 130, 270, 440, etc

Doubles and halves of all multiples of 100 to 500 e.g., 100, 200, 300, 400, 500.

Halves	Number	Doubles
50	100	200
100	200	400
150	300	600
200	400	800
250	500	1000

- Encourage children to make links:
Doubling → multiplying by 2
Halving → dividing by 2
- Regular 5 / 10 minutes practice, quick-fire questions.
- 'Speed challenge': how many doubles and halves can you get right in 3 minutes? (using kitchen timer).
- Progress to 'Beat your record': can you get 5 more right than yesterday?
