As Jesus and his disciples were getting close to Jerusalem they came to the Mount of Olives.

He sent two of his disciples on ahead and told them, "Go into the village over there. You will see a colt tied up, that no one has ridden yet."

"Untie it and bring it to me. If anyone asks you what you are doing, tell him "The Master needs it now and will send it back."

They went off and did as Jesus said. Jesus mounted the colt. As he rode along people spread their cloaks on the road. Some cut branches and spread these before him.

The people were all shouting, "Hosanna! Praise God! Blessed is he who comes in the name of the Lord! Hosanna! Praise God!"

Birds in Your Garden

There are many different types of bird that you might see in your garden. Here are a few of them:

Robin

Robins are very noticeable in your garden. They have a red breast and a brown head and back. They have long legs and a short tail. They are very territorial. This means they live in one area and will defend it very aggressively if another robin tries to live there. They eat insects, fruit, seeds and worms.

Jackdaw

The jackdaw is a noisy bird. You would definitely notice this bird in your garden. They are quite large with grey at the back of their neck, a stubby beak and striking white eyes. They eat insects, dead animals, eggs, young birds and seeds. Jackdaws are known for stealing things; not just food but objects too!

Blue tit

The blue tit is a very small bird with bright yellow and blue feathers. They eat insects, caterpillars, seeds and nuts. They lay eggs between the end of April and May. They often eat from bird tables and live in garden nesting boxes. The male and female blue tits look the same. In winter, family flocks join up with other blue tits as they search for food.

Blackbird

Blackbirds are very common garden birds but they also live in farmland, woodland and near streets and coasts. They eat insects, worms, seeds and fruit. Blackbirds tend to be solitary birds. This means they do not live in flocks, but instead they live on their own. The male is glossy black with an orange beak and an orange ring around its eye. The female is less attractive, being dark brown with a brown beak. They nest in trees and their birdsong is easily recognised.

Heron

If you or your neighbours have a pond in their garden, you might see a heron either standing next to the pond or flying nearby. They love to eat fish and have been known to steal expensive fish from people's ponds! They are quite large, have a long thin beak, long spindly legs and long neck. When they fly, they stretch their legs out behind them and their neck is folded back. They nest in trees within colonies.
