

St Silas Primary School

Design and Technology Policy

Design and Technology Subject Leader Miss A Greenwood

The purpose of the Design and Technology policy

This policy outlines the teaching and learning of design and technology. All children will have the opportunity to undertake design and technology throughout their time at St Silas Primary School. This will be so structured as to give a sound basis for further work.

Aims

Design and technology is a practical subject.

- We aim to prepare pupils to participate in tomorrow's rapidly changing technologies.
- To provide opportunities for all the children to design and make quality products.
- To provide children with the opportunity to explore food and cooking techniques along with healthy eating and environmental issues within food production.
- To develop design and making skills, knowledge and understanding to the best of each child's ability; using and selecting a range of tools, materials and components.
- To become creative problem solvers as individuals and members of a team.
- To be able to use computing in conjunction with the Designing and Making process.
- To develop an ability to criticise constructively and evaluate their own products and those of others.
- To help the children develop an understanding of the ways people in the past and present have used design to meet their needs. To reflect on and evaluate such techniques, its uses and effects.
- To prepare the children for living in a multi-cultural society by teaching consideration for other culture which will be both important and beneficial.

Curriculum and school organisation

We use units of work written by the Nuffield Foundation to support teaching and learning. We teach DT skills discreetly, often in 'blocked' units and through our Curriculum themes, when strong links can be made. We ensure that all children access all areas of the Design Technology Curriculum.

Our scheme of work is available on our website here:

<https://stsilasprimary.co.uk/classes-curriculum/curriculum-overview/design-technology>

Personal, social and health education (PSHE)and citizenship

Design and technology contributes to the teaching of personal, social and health education and citizenship. We encourage the children to develop a sense of responsibility in following safe procedures when making things. They also learn about health and healthy diets. Their work encourages them to be responsible and to set targets to meet deadlines, and they also learn through their understanding of personal hygiene, how to prevent disease from spreading when working with food.

Spiritual, moral, social and cultural development

The teaching of design and technology offers opportunities to support the social development of our children through the way we expect them to work with each other in lessons. Our groupings allow children to work together, and give them the chance to discuss their ideas and feelings about their own work and the work of others. Through their collaborative and co-operative work across a range of activities and experiences in design and technology, the children develop respect for the abilities of other children and a better understanding of themselves. They also develop a respect for the environment, for their own health and safety and for that of others. They develop their cultural awareness and understanding, and they learn to appreciate the value of differences and similarities. A variety of experiences teaches them to appreciate that all people are equally important, and that the needs of individuals are not the same as the needs of groups.

Assessment

Assessing a child's performance is a continuous process carried out over the full seven years of Primary school and our assessing methods include the following as appropriate:-

1. Looking at a child's recorded work i.e. model, photographs, written work.
2. Individual discussion.
3. Listening to the children's ideas as they discuss between themselves.
4. Group discussions in both planning and reporting back sessions.
5. Observing the children's skills in Design and Technology.

Safety in Design and Technology

The safety of the children is the responsibility of the class teacher. The children are made aware of the safe use and correct procedure involved when using tools and equipment in a learning environment and how to follow proper procedures for food safety and hygiene. The children are made aware of the need to be careful and to understand that their actions can affect others.

The children build up a range of skills when using equipment to reduce unnecessary risk. All staff, including helpers, are made aware of food safety procedures when working with food to minimise any risks. The children wear protective clothing if necessary.

Monitoring and review

The monitoring of the standards of children's work and of the quality of teaching in design and technology is the responsibility of the design and technology subject leader. The work of the subject leader also involves supporting colleagues in the teaching of design and technology, being informed about current developments in the subject, and providing a strategic lead and direction for the subject in the school. The design and technology subject leader gives the headteacher an annual report in which she evaluates the strengths and weaknesses in the subject and indicates areas for further improvement. The design and technology subject leader has specially-allocated, regular management time in order to review evidence of the children's work and undertake lesson observations of design and technology teaching across the school.
