

Y6 Art – Perspective and Composition

Perspective Drawing

- Perspective drawing is the art of depicting a three-dimensional (3D) image onto a two-dimensional (2D) flat surface. In simpler terms, it means, creating the illusion of depth on a flat 2D sketch
- Perspective drawing is a drawing that is made according to the human eye. Usually the human eye sees objects that are getting farther away, it will look smaller so that the resulting drawing looks more realistic.

1 Point Perspective Drawing

- The perspective of one point is often used to draw objects that are close to the eye. The location of objects that are close makes the eye point of view narrow so that the boundary lines will go to just one point. It is said to be lost because the point that is made is not visible or vague for the benchmark to make a line or the boundary of the object to be made.

Vocabulary	
Perspective	Gives art work a 3D look
Composition	Putting together the different parts of a piece of art
Horizon	The axis around which a perspective drawing is constructed
Foreground	The closest area of the picture.
Middleground	The main focal area of the painting, between the foreground and the background.
Background	The part of the picture behind the main focal point.
Focal Point	The main point of interest of a piece of art.
