

## Division

We have been learning about division.

$$12 \div 2 = 6$$

12 represents the total number you are sharing.

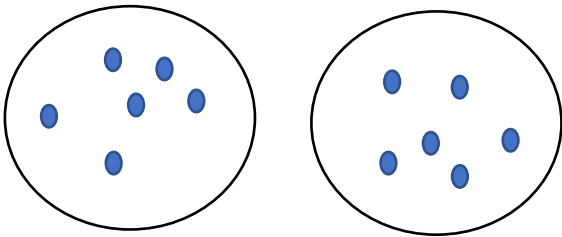

2 represents the total groups you are sharing into.

6 represents how many are in each group.

You can solve these practically using practical apparatus.

You could also solve this by sharing the total number of jottings into groups.

$$12 \div 2 = 6$$

We have also been using Division Dave to solve problems.

$$12 \div 2 = 6$$
