

Unit R105/6

In this section we are going to learn about manufacturing processes. This will help us with preparation for the exam in unit R105 and help us understand what we have to do in unit R106.

This section will take some research but everything you need to find is available on the internet.

The processes we will look at involve different materials.

- Plastics (injection moulding and blow moulding)
- Woods (CNC machining)
- Metals (sand casting, die casting, CNC machining)
- Printed circuit boards (CNC machining)
