#### WHOLE SCHOOL SCIENCE OVERVIEW

When teaching Science, the following area must be covered:

BIOLOGY

PHYSICS (substantive knowledge)

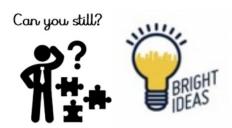

CHEMISTRY

Working Scientifically (disciplinary knowledge)

THE FIRST AND LAST LESSON IN ANY TOPIC MUST BE A RETRIEVALLESSON TO ENSURE CHILDREN ARE MAKING LINKS WITH PREVIOUS LEARNING THEREFORE REMEMBERING MORE AND LEARNING MORE.

Make sure objectives in pacers come from the new planning documents for each year group. Be mindful of what is a statutory requirement and what is non-statutory (and therefore only guidance).

In ALL lessons, the 'Can You Still' logo and the 'Bright Ideas' logo needs to be displayed and discussed. What does the skill mean? What might we be doing today? When did we last use the skill? How does this link to what a historian might do?

And finally, remember, we are teaching children to be SCIENTISTS, not fact machines!

Working	During years 1 and 2, pupils should be taught to use the following practical scientific methods,
Scientifically	processes and skills through the teaching of the programme of study content:
	♣ asking simple questions and recognising that they can be answered in different ways
	♣ observing closely, using simple equipment
	performing simple tests
	♣ identifying and classifying
	using their observations and ideas to suggest answers to questions
	a gathering and recording data to help in answering questions.
Seasonal	observe changes across the four seasons ♣ observe and describe weather associated with the
Change	seasons and how day length varies.
Plants	Identify and name a variety of common wild and garden plants, including deciduous and evergreen
	trees.
	Identify and describe the basic structure of a variety of common flowering plants, including trees.
Animals	Identify and name a variety of common animals including fish, amphibians, reptiles, birds and
Including	mammals.
Humans	Identify and name a variety of common animals that are carnivores, herbivores and omnivores.
	Describe and compare the structure of a variety of common animals (fish, amphibians, reptiles,
	birds and mammals, including pets).

	Identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense.
Everyday Materials	Distinguish between an object and the material from which it is made.  Identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock.
	Describe the simple physical properties of a variety of everyday materials.  Compare and group together a variety of everyday materials on the basis of their simple physical properties.

# YEAR 2

Working	During years 1 and 2, pupils should be taught to use the following practical scientific methods,
Scientifically	processes and skills through the teaching of the programme of study content:
	asking simple questions and recognising that they can be answered in different ways
	♣ observing closely, using simple equipment
	♣ performing simple tests
	♣ identifying and classifying
	using their observations and ideas to suggest answers to questions
	♣ gathering and recording data to help in answering questions.
Living	Explore and compare the differences between things that are living, dead, and things that have
Things and	never been alive.
their	Identify that most living things live in habitats to which they are suited and describe how different
Habitats	habitats provide for the basic needs of different kinds of animals and plants, and how they depend
	on each other.
	Identify and name a variety of plants and animals in their habitats, including microhabitats.
	Describe how animals obtain their food from plants and other animals, using the idea of a simple
	food chain, and identify and name different sources of food.
Plants	Observe and describe how seeds and bulbs grow into mature plants.
	Find out and describe how plants need water, light and a suitable temperature to grow and stay
	healthy
Animals	Notice that animals, including humans, have offspring which grow into adults.
Including	Find out about and describe the basic needs of animals, including humans, for survival (water, food
Humans	and air).
	Describe the importance for humans of exercise, eating the right amounts of different types of
	food, and hygiene.
Uses of	Identify and compare the suitability of a variety of everyday materials, including wood, metal,
Everyday	plastic, glass, brick, rock, paper and cardboard for particular uses.
Materials	Find out how the shapes of solid objects made from some materials can be changed by squashing,
	bending, twisting and stretching.

	Working Scientifically	During years 3 and 4, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:
		<ul> <li>asking relevant questions and using different types of scientific enquiries to answer them.</li> <li>setting up simple practical enquiries, comparative and fair tests.</li> </ul>
		making systematic and careful observations and, where appropriate, taking accurate measurements using standard units, using a range of equipment, including thermometers and data
	loggers.	
	gathering, recording, classifying and presenting data in a variety of ways to help in answering questions.	
		A recording findings using simple scientific language, drawings, labelled diagrams, keys, bar charts, and tables.

Working	During years 3 and 4, pupils should be taught to use the following practical scientific methods,
Scientifically	processes and skills through the teaching of the programme of study content:
	♣ asking relevant questions and using different types of scientific enquiries to answer them.
	setting up simple practical enquiries, comparative and fair tests.
	♣ making systematic and careful observations and, where appropriate, taking accurate
	measurements using standard units, using a range of equipment, including thermometers and data loggers.
	* gathering, recording, classifying and presenting data in a variety of ways to help in answering questions.
	* recording findings using simple scientific language, drawings, labelled diagrams, keys, bar charts, and tables.
	* reporting on findings from enquiries, including oral and written explanations, displays or presentations of results and conclusions.
	using results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions.
	♣ identifying differences, similarities or changes related to simple scientific ideas and processes.
	♣ using straightforward scientific evidence to answer questions or to support their findings.

Living	Recognise that living things can be grouped in a variety of ways.
Things and their	Explore and use classification keys to help group, identify and name a variety of living things in their
Habitats	local and wider environment.
Tiabitats	Recognise that environments can change and that this can sometimes pose dangers to living things.
Animals	Describe the simple functions of the basic parts of the digestive system in humans.
Including	Identify the different types of teeth in humans and their simple functions.
Humans	Construct and interpret a variety of food chains, identifying producers, predators and prey.
States of	Compare and group materials together, according to whether they are solids, liquids or gases.
Matter	Observe that some materials change state when they are heated or cooled, and measure or
	research the temperature at which this happens in degrees Celsius (°C).
	Identify the part played by evaporation and condensation in the water cycle and associate the rate
	of evaporation with temperature.
Sound	Identify how sounds are made, associating some of them with something vibrating.
	Recognise that vibrations from sounds travel through a medium to the ear.
	Find patterns between the pitch of a sound and features of the object that produced it.
	Find patterns between the volume of a sound and the strength of the vibrations that produced it.
	Recognise that sounds get fainter as the distance from the sound source increases.
Electricity	Identify common appliances that run on electricity.
	Construct a simple series electrical circuit, identifying and naming its basic parts, including cells,
	wires, bulbs, switches and buzzers.
	Identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp
	is part of a complete loop with a battery.
	Recognise that a switch opens and closes a circuit and associate this with whether or not a lamp
	lights in a simple series circuit.
	Recognise some common conductors and insulators, and associate metals with being good
	conductors.

Working Scientifically	During years 5 and 6, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:  planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary.  taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate.  recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs.  using test results to make predictions to set up further comparative and fair tests.  reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations.
Living Things and their Habitats	♣ identifying scientific evidence that has been used to support or refute ideas or arguments.  Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird.  Describe the life process of reproduction in some plants and animals.
Animals Including Humans	Describe the changes as humans develop to old age.
Properties and Changes of Materials	Compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets. Know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution.  Use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating.

	Give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic.  Demonstrate that dissolving, mixing and changes of state are reversible changes.  Explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda.
Earth and Space	Describe the movement of the Earth, and other planets, relative to the Sun in the solar system.  Describe the movement of the Moon relative to the Earth.  Describe the Sun, Earth and Moon as approximately spherical bodies.  Use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky.
Forces	Explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object.  Identify the effects of air resistance, water resistance and friction, that act between moving surfaces.  Recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect.

	YEAR 6
Working Scientifically	During years 5 and 6, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:  planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary.  taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate.  recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs.  using test results to make predictions to set up further comparative and fair tests.  reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations.  dientifying scientific evidence that has been used to support or refute ideas or arguments.
Living Things and their Habitats	Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including microorganisms, plants and animals.  Give reasons for classifying plants and animals based on specific characteristics.
Animals Including Humans	Identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood.  Recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function.  Describe the ways in which nutrients and water are transported within animals, including humans.
Evolution and Inheritance	Recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago.  Recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents.  Identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution.
Light	Recognise that light appears to travel in straight lines.  Use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye.  Explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes.  Use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them.

Electricity	Associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells
	used in the circuit.
	Compare and give reasons for variations in how components function, including the brightness of
	bulbs, the loudness of buzzers and the on/off position of switches.
	Use recognised symbols when representing a simple circuit in a diagram
