Subtracting by counting back - crossing 10

## Subtract 1 Digit from 2 Digits

Ben has been subtracting 1-digit numbers.

$$45 - 8 = 37$$

$$72 - 4 = 76$$

$$94 - 7 = 87$$

$$26 - 9 = 17$$

I think you have got 3 of them wrong.

Do you agree with Anna? Prove it. Correct any mistakes Ben has made.
