

The Seasons

We have seasons because the _____ orbits the _____.

It takes the Earth _____ days (or one year) to orbit the Sun. Because the Earth is tilted on its axis, at all times of the year one _____ is always tilted either _____ or _____ away from the Sun. In the hemisphere that is tilted towards the Sun, it is _____ because the Sun's rays hit that hemisphere more strongly. In the hemisphere that is tilted away from the Sun it is Winter because the Sun's rays take longer to reach it and so they lose some of their strength. That's why it's _____ in Winter!

<i>Summer</i>	<i>Earth</i>	<i>cold</i>	<i>Sun</i>
<i>365</i>	<i>towards</i>	<i>side</i>
