

YEAR 5 - MUSIC - SPACE - PLANET LYRICS

Here are some facts we found out about the planets (including Pluto)

Mercury is Closest to the Sun

Venus spins the opposite way

Planet Earth is our home

Mars is known as the red planet

Jupiter has a great big spot

Saturn has icy rings

Uranus spins on its side

Neptune has lots of storms

Pluto is known as a dwarf planet

We used these facts to fit into an existing song and make up the new song words (lyrics)

We used the melody from “Star Trekking” and matched in the syllables with the notes of the **verse**.

For the **chorus** we sang...

Star Trekking Across the Universe. On the ship Yarm Primary, under Captain... (Child’s name)

We built up verse and chorus into blocks. This is known as song **structure**

Chorus x2	Verses Mercury Venus Earth	Chorus x2	Verses Mars Jupiter Saturn	Chorus x2	Verses Uranus Neptune Pluto	Chorus x2

MISSION SPACE

SPACE MISSION 3 -

Pick a song you are familiar with.

Change the verses to use words that are facts about planets. (You can use the facts on this sheet or use your own).

Do they fit in to the tune?

You might have to alter a few words or syllables to get it to fit.

In the chorus keep it simple and repetitive

You might like to do a sound recording if you have the facilities

Can you think of any actions that might go with the words?
